Professional Summary

Performance-driven Technical Support Engineer and Full-Stack Developer with a proven track record of optimizing platform stability, building internal automation tooling, and deploying production-level AI engineering workflows. Specialized in leveraging TypeScript, Python, and PostgreSQL to design robust data pipelines and diagnostic tools for enterprise-level cloud platforms. Adept at managing the full defect lifecycle and translating complex technical problems into scalable engineering solutions.

Technical Skills

Languages & Frameworks: TypeScript, JavaScript (ES6), Python, SQL, Angular, React, Node.js, Express, MERN Stack
AI & Agentic Architecture: Semantic Kernel Agentic Framework, Model Context Protocol (MCP), GitHub Models, Cursor, Claude Code, RESTful APIs
Databases & DevOps: PostgreSQL, MongoDB, MySQL, Datadog, GitHub Actions, Git, GitLab, AWS, Docker, Orbstack, Heroku
Diagnostics & UI Tooling: Postman, Network Tracing, System Telemetry, ReactStrap, Bootstrap, Bulma

Relevant Experience | Projects

Blurb Books | Full Stack Application | Deployed App | Source Code

- Built a responsive full-stack bookstore application utilizing the **MERN stack**, implementing secure **JWT/bcrypt** authentication and **RESTful API** integrations to scale reading list cataloging.

Loan Shark | Full Stack Application | Deployed App | Source Code

- Developed a financial tracking application leveraging **React**, **ReactStrap**, **React Hooks**, and **MongoDB** to log personal loans, track payments, and visualize debt elimination progress.

Work History

Technical Support Engineer | **ClickUp** – Remote 09/2024 to 06/2026

- **AI-Driven Software Engineering**: Selected as one of two original employees org-wide to pilot AI SWE tools (**Cursor**, **Claude Code**); shipped ~100 production bug fixes (**TS/Angular/Git**) and upskilled internal teams to scale a 6-person squad's output to 30+ weekly fixes.
- **Autonomous Defect Triage & Analytics**: Developed an AI triage UI leveraging the **Semantic Kernel Agentic Framework** and **GitHub Models** to analyze production defects and automatically surface 6 optimal candidates for AI coding; engineered a parallel **JS/TS** data pipeline via **GitHub Actions** syncing 20k+ live defects with the **Google API** for executives.

- **Internal Diagnostics & AI Architecture**: Built an in-platform client analysis agent scanning 50k+ defects to instantly map user footprints; designed and developed a custom **Model Context Protocol (MCP)** server in **TypeScript** to automate complex workspace merge pre-check API calls for self-service engineering workflows.
- **Infrastructure Engineering & Tooling**: Partnered to build a unified script automation library UI (**Python**, **Node.js**, **SDM CLI**) and engineered custom **PostgreSQL** relational database workflows utilizing **Docker**, and **Orbstack** to accelerate root-cause analysis and resolution.

Senior Technical Support Specialist | **ClickUp** – Remote 09/2023 to 09/2024

- **Platform Performance & Observability:** Standardized infrastructure investigations using network traces and **Datadog**, leading full-lifecycle reproduction, isolation, and telemetry reporting of critical defects for enterprise-level clients.
- **Distributed Systems & Feature Testing:** Spearheaded QA testing for feature releases, executing shard-specific environment tests validating stability and performance.
- **Tooling Development & Org Scaling:** Co-developed the ClickUp Workspace Explorer Chrome Extension (**TS**/**Vite**) for internal diagnostics; served as 1 of 4 original Subject Matter Experts pioneering a specialization framework scaled across a 200+ person global team.

Technical Support Specialist | **ClickUp** – Remote 01/2022 to 08/2023

- **Integration & API Diagnostics**: Managed technical support for developer tools, providing advanced troubleshooting for the ClickUp **REST API**, **OAuth**, webhooks, and **SSO** configurations; appointed as organizational SME for third-party automation platforms (**Make.com**, **Zapier**) and VCS (**GitHub**, **GitLab**).
- **Cross-Functional Defect Engineering & QA**: Partnered with engineering squads to troubleshoot, reproduce, and document high-priority platform defects; executed manual QA and regression testing to validate bug fixes and optimize the escalation pipeline.

Coach | **ClickUp** – Remote 08/2021 to 01/2022

- **Workflow Architecture & User Success**: Leveraged deep product expertise to design optimized user workflows and resolve complex platform issues; accelerated customer success by troubleshooting platform setups and delivering technical consultation via email and video calls.

Staffing Recruiter | **Elwood Staffing** – Longmont, CO 08/2019 to 08/2021

- **Full-Cycle Recruitment**: Directed end-to-end HR compliance workflows, payroll processing, and onboarding SOPs for 25+ enterprise clients; managed full-cycle recruitment pipelines, consistently exceeding YTD net income targets earning 5 Superior Customer Service awards.

International English Teacher | **IQ International School** – Cambodia 10/2016 to 03/2019

- **Curriculum Architecture & Cross-Functional Leadership**: Designed a comprehensive grade 4–9 mathematics curriculum, student data progress tracking via advanced Excel analytics.

Education

Full Stack Web Development Certificate | **University of Denver** - Denver, CO 06/2021

BBA: Management & Economics | **Colorado Mesa University** - Grand Junction, CO 12/2014
